

ECODORA SURFACE

The elegant way of expressing your own style.

ECODORA DOOR PANELS

The front door is the first impression you get of a house and its residents. It welcomes visitors, and gives your home individuality and personal style.

The high-quality decor films offer various scopes for design. Thanks to the great choice of shades and different structures, the door panels can be matched excellently to the appearance of the house. You can choose shades out of the common colours for windows or create a coloured eye-catcher. However, decor films are a profit, not only optically, but also in terms of functionality and sustainability. They are easy-care and weather- and UV-resistant. Discover the front door of your dreams right now.

Kindest regards,
Your adeco Türfüllungstechnik GmbH

handle (semi-circular)
matt brushed stainless steel or black Finea 370
with straight handle supports
HA 312 length 1,040 mm
HA 289 length 1,480 mm

GENERAL INFORMATION AND CARE

Thanks to its composition, stainless steel does not rust simply through contact with oxygen. Nevertheless, a rust film may form on the surface due to environmental conditions (air containing salt or iodine), contact with ferrous materials or other soiling. To protect the surface from soiling, we recommend regular cleaning of the stainless steel surfaces using a suitable standard cleaning agent. For reproduction and printing reasons, the representation of colours and stainless steel inlays of front door panels as well as handles is not binding.

For a perfect colour-coordination, we recommend using original RAL charts or adeco colour samples. The effects created by glazings and colours also depend on the actual lighting conditions, the time of day, the season and the place of installation.

The outer appearance of the front door changes if the size of the individual door deviates from the size of the front door shown in the catalogue. For more information, please ask your specialised dealer. Technical modifications reserved.
