

MAINTENANCE AND CARE INSTRUCTIONS

adeco products are designed for a long life. We select our materials carefully so that the product barely requires any care.

If you observe the following care instructions, your adeco entrance door panel will retain its distinguished appearance even after many years of daily use. We recommend cleaning and maintaining your door panels every six months, in particular after the blooming season.

Finishes

adeco entrance door panels made of aluminium are powder-coated with durable, weatherproof paints. These finishes are long-lasting and extremely resistant to scratches and atmospheric influences. However, surface soiling due to dust and other airborne substances is unavoidable.

Use

We recommend applying the adeco cleaner to a soft, clean, damp cloth (e.g. a microfibre cloth) to clean the adeco door panel at regular intervals. Afterwards, rinse the clean surface with sufficient clear water. Remove all cleaner residue, as any remaining residues can lead to surface changes.

Do not use soiled, hard or dry cleaning cloths, as they will damage the surface.

Do not use the cleaner in direct sunlight or outdoor temperatures of over 25°C. Only use the adeco cleaner on adeco products and adjacent areas.

Notes

If you intend to use a different cleaner, we recommend testing it in a concealed spot. Please observe the information provided by the cleaning agent manufacturer. Soiling due to grease, oil, soot, adhesive residue etc. can best be removed using aromatic white spirits or isopropyl alcohol (IPA).

Cleaning with a steam-jet degreaser is not permitted. Do not use solvents that contain esters, ketones, high-grade alcohols, aromatic compounds, glycol ethers, alkaline cleaners, acids, lyes, mortar or lime water, halogenated hydrocarbons or the like. Do not use abrasive cleaners as these could damage the finish.

Do not allow sunscreen to come into contact with coated surfaces. This will cause surface changes that are impossible to remove. Using any kind of adhesive films on the finish should be avoided, as this could result in damage.

To remove animal faeces, wait until they are completely dry, then immediately spray them with adeco cleaner and remove them, as sunlight can fuse them to the finish.

Ingredients

EC-REC. 89 / 542 / EEC: <5% anionic surfactants, artificial colourants and fragrances (d-limonene)

The safety data sheet for the adeco cleaner is available on the homepage of our website in the "tab" Manuals and in the download area of the retailer login on our website www.adeco.de.
