

A C C E N T A

The elegant way of expressing your own style.

THE DOOR PANEL

... is definitely the eye-catcher of your façade: it brings to life the design features of your entrance door. The entrance door further underlines the characteristics of a home - always with the aim to „express your own style the elegant way“, as we like to put it. Timelessness, clear contours, pure style: these features make our design outstanding. It is truly traditional, but also innovative. We assure you that you will find a variety of options – designed to suit your every need and special requirement.

Kindest regards,
Your adeco Türfüllungstechnik GmbH

The interaction of colours adds individuality and personality to your home. Whether you prefer a harmonious design with coordinated colours or contrasts of colour in order to generate accentuations full of energy – your style matters. Please find a more detailed description of the numerous surfaces of our current colour concept on the following pages.

COATING BRILEA
The silk-glossy surface accentuates the colour with different sources of lights.

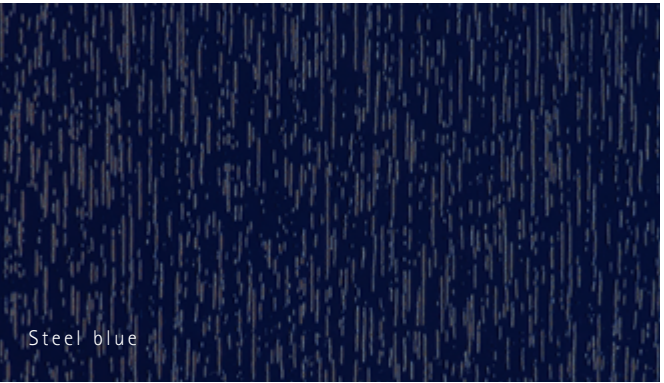

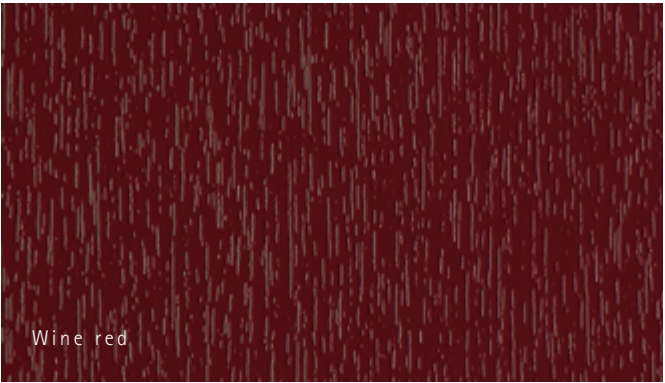

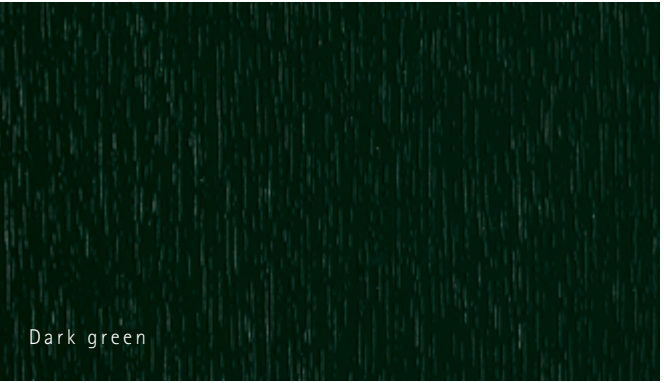

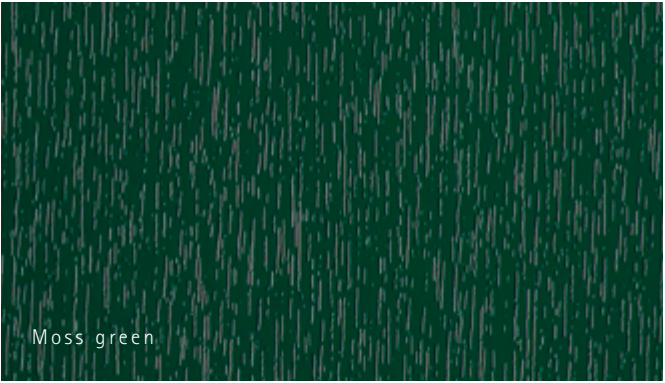

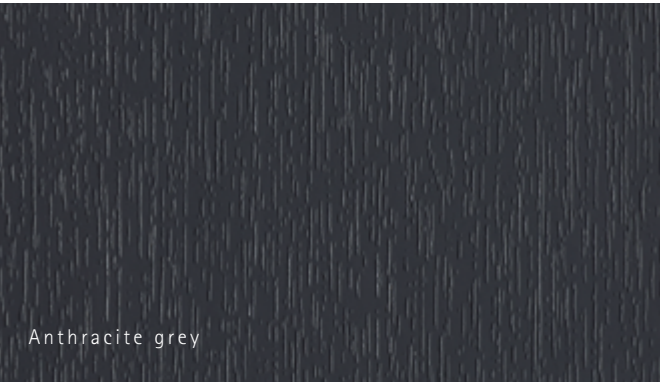

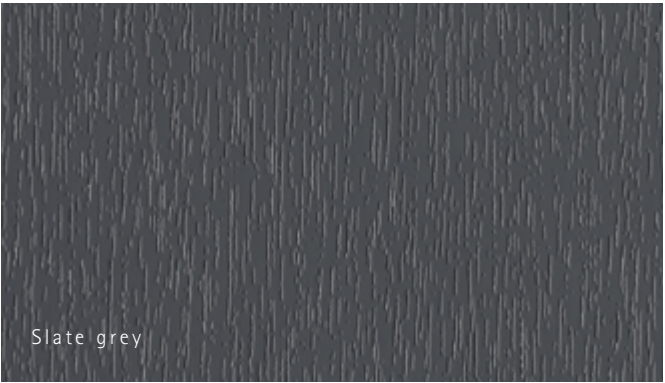

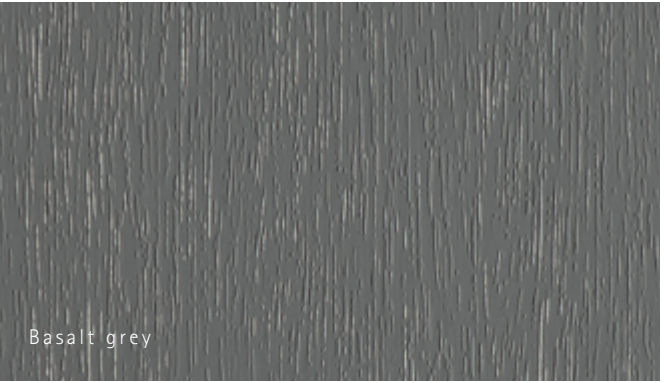

DECOR UNI STRUCTURED SURFACE
Most subtle structures lend the uni structured surfaces their wooden looks. They give our technically perfect entrance door panels a natural appearance.

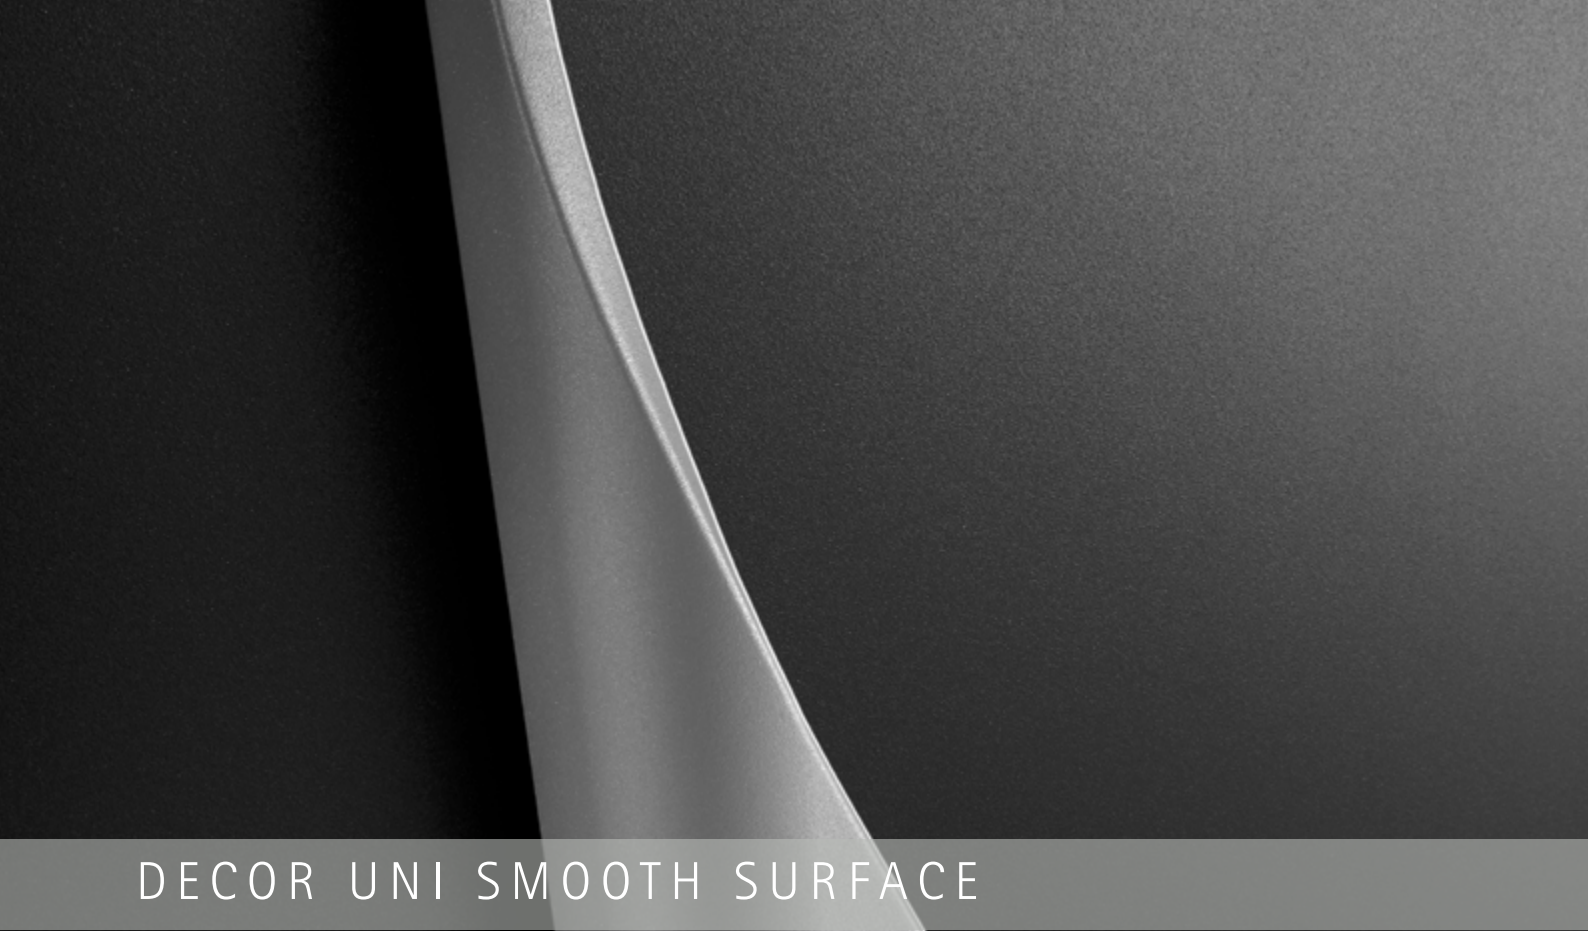

DECOR UNI SMOOTH SURFACE
Smooth, plain decor films stand out for their elegance. They are characterised by their low-maintenance and high resistance to weather and UV-radiation.

DECOR WOODEN STRUCTURE
Do you like softwood or hardwood better? Our entrance door panels with wooden structure surfaces are easy to confuse for real wooden doors.

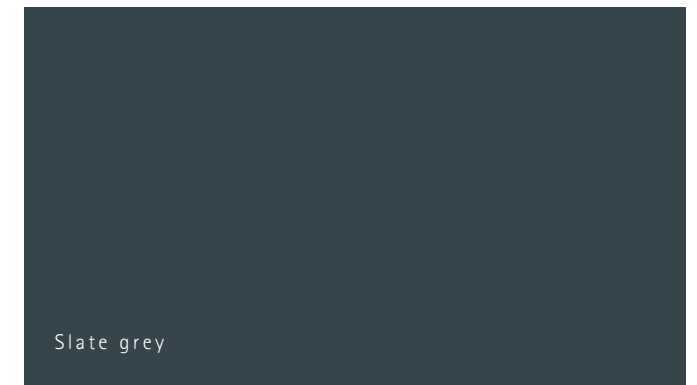

Please use the manufacturer's fan of films to determine the exact colour and structure.

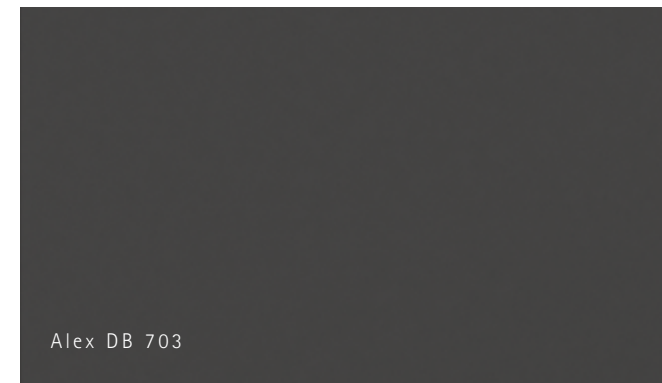

DECOR UNI SMOOTH SURFACE

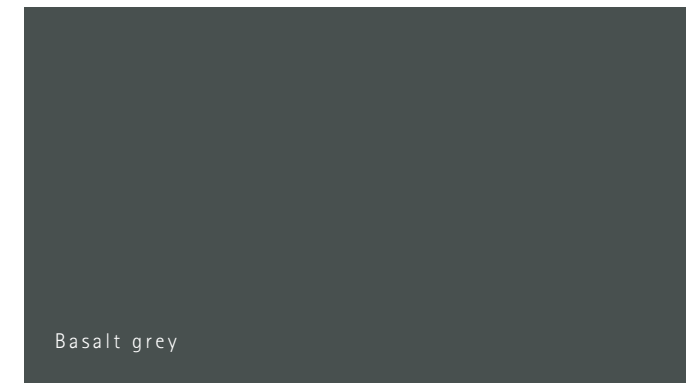

Anthracite grey

Slate grey

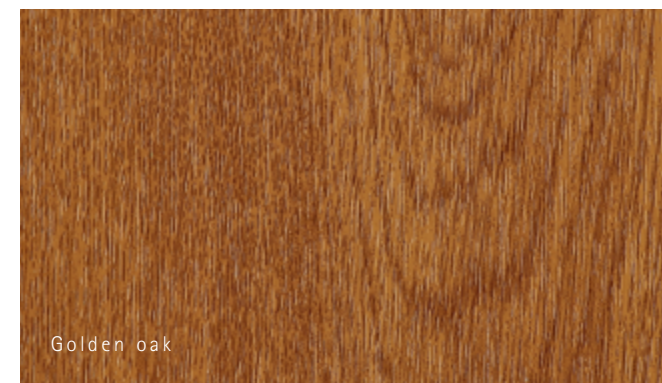

Alex DB 703

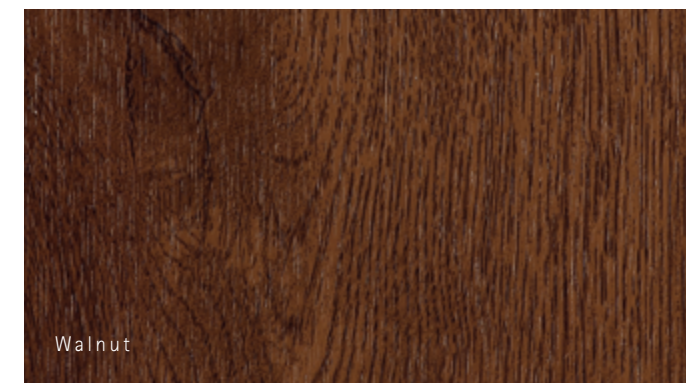

Basalt grey

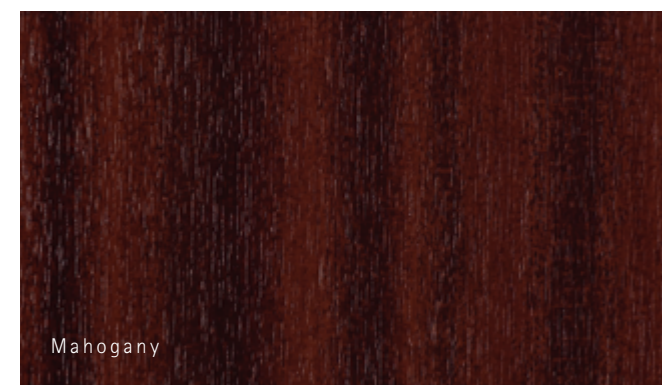

DECOR WOODEN STRUCTURE

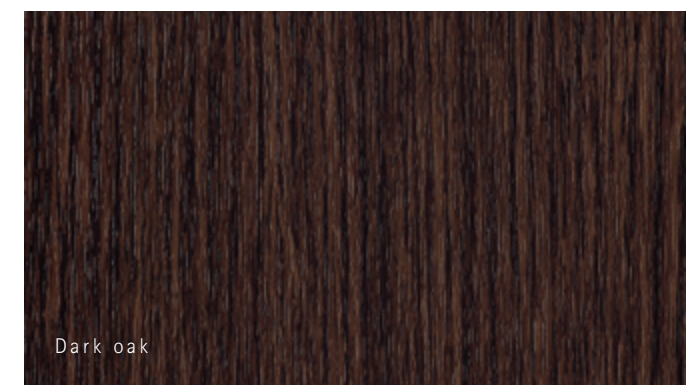

Golden oak

Walnut

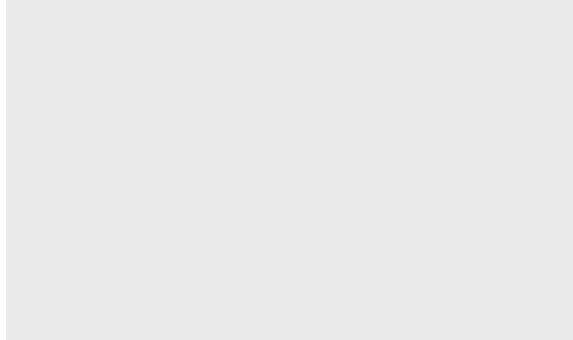

Mahogany

Dark oak

Please use the manufacturer's fan of films to determine the exact colour and structure.

The infill panel (E)

Exterior view

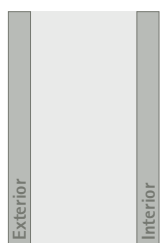

Interior view

Design/Functionality

Modern classic design – a panel inserted in the door sash, with a glass holding sheeting on the interior (GHS)

Composition

- high insulating PU rigid foam core
- double insulating glass with one standard low-emissivity coating and argon gas

The one-sided attachment panel (A)

Exterior view

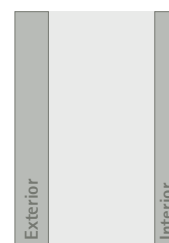

Interior view

Design/Functionality

Elegant on the outside because of sash-concealing design, functional and easy to clean and maintain on the inside because of glass holding sheetings (GHS)

Composition

- high insulating PU rigid foam core with 4 mm cellulose layer
- double insulating glass with one standard low-emissivity coating and argon gas

The double-sided attachment panel (B)

Exterior view

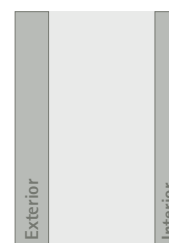

Interior view

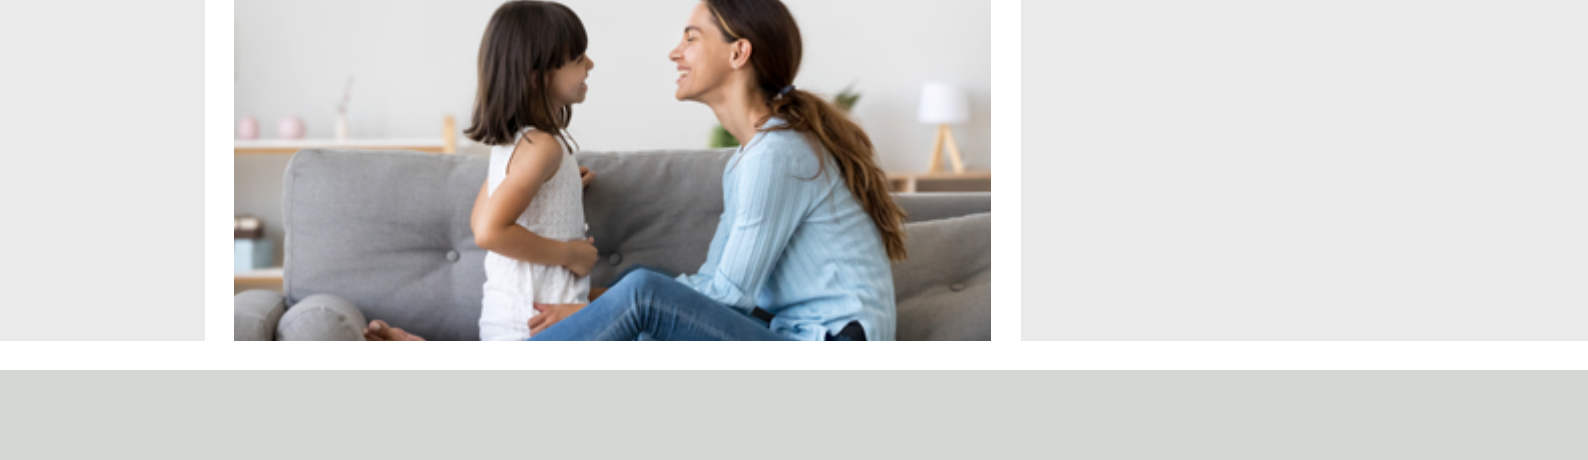

Design/Functionality

Elegant on the outside and the inside because of sash-concealing, generous design

Composition

- high insulating PU rigid foam core with 4 mm cellulose layer in door sash thickness
- total insulation at least 55 mm
- triple insulating glass with two standard low-emissivity coatings and argon gas in both gaps

CARE INFORMATION

STAINLESS STEEL MATT BRUSHED / POLISHED

Due to its composition, stainless steel does not rust solely because of the contact with oxygen. Nevertheless, a rust film can build on the surface due to environmental conditions (air containing salt and iodine), because of contact with ferrous materials or other soiling. It can be removed using cleaning agents for stainless steel products. To protect against any stains on the surface, we recommend to clean all stainless steel parts regularly, using a commercially available stainless steel care product.

BURNISHED BRASS

In the course of time, brass takes on a matt patina due to natural weathering, which is typical for this material. The patina is a natural protection of the metal against external effects. Over time, the material shows natural traces of use, accentuating the value of brass. To clean it, use a moist cloth first, then dry with a soft cloth.

Due to reproduction and printing-related reasons, the illustrations of colours, decors, stainless steel features and inlays, silver anodised and brass features of door panels and handles are not binding. We recommend using original RAL colour charts or adeco

colour samples for the exact determination of colours. The effect and looks of colours and (ornamental) glass differ depending on the source of light, time of day, season and place of installation.

The exterior views of one-sided (A) and double-sided (B) attachment panels are the same. The interior view of double-sided attachment panels is different from the interior view of one-sided attachment panels. For further explanations as to the different designs of one-sided and double-sided attachment panels, please refer to page 88-89.

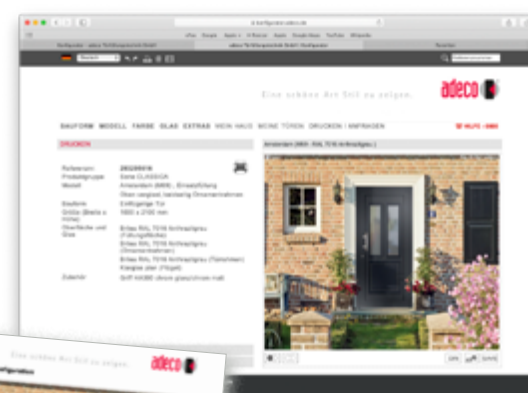

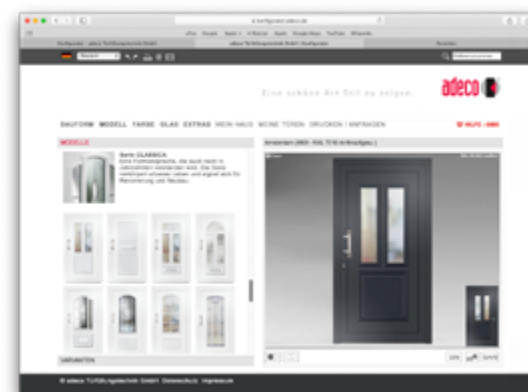

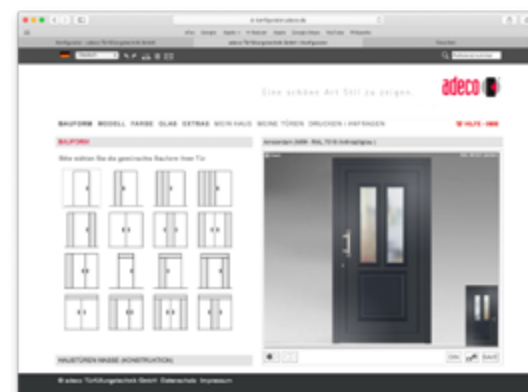

The face widths of the door frames vary, depending on the profile system used for frame and sash, and the place of installation. The total thickness of the panel also depends on the profile system used. The looks of the entrance door change when the size of it differs from the sizes shown in the catalogue.

For any further information, please contact your specialised dealer. Subject to technical modifications.

THE CONFIGURATOR

You have found your own special entrance door panel? We are glad to hear that. Now you would like to see how the panel fits to your house – no problem. Visit our website at www.adeco.de/en. One click and you can access our entrance door configurator.

In a few minutes, you can create a very realistic view of your future entrance. You do not have to have special IT skills – the configurator is very easy and leads you through the process step by step, without the need of typing in any personal data. Create numerous variants and make your personal choice, conveniently from home.
